

The background of the entire page is a photograph of the Temple of Apollo at Delphi. The temple is a well-preserved ancient Greek temple, featuring a series of tall, fluted Doric columns supporting a heavy entablature. The structure is built on a high, rocky platform. In the foreground, there are some stone blocks and a low wall. The sky is a clear, deep blue, and in the distance, the sea and some hills are visible.

Hellenion
Calendar
2026

THIS CALENDAR is the working calendar of Hellenion, a diverse group of Hellenic Polytheists sharing the common goal of living a life of piety and proper respect for the Gods of Olympus and ancient Hellenic tradition.

The calendar is based on the monthly and annual observances and festivals of the ancient Athenians from about 800 BCE to 323 BCE. This version was created using information derived from information provided by Time and Date,

<https://www.timeanddate.com/moon/phases/?year=2026>, and Hellenic Month Established Per Athens (HMEPA), see

at <http://www.numachi.com/~ccount/hmepa/calendars/701.1.Gamelion.html> for the 1st year of the 701st Olympiad (until June) and the second year of the 701st Olympiad in 2026 (from June on),

and the following sources:

Greek Religion by Walter Burkert (Harvard University Press, 1977, English translation: Basil Blackwell Publisher and Harvard University Press, 1985),
Old Stones, New Temples; ancient Greek paganism reborn, by Drew Campbell (Xlibris Corporation, 2000),

Festivals of the Athenians, by H. W. Parke (London, Thames and Hudson, 1977)

A web version of this calendar is now available at the Hellenion web site:

<https://www.hellenion.org/calendar>. That version contains links to descriptions of all the special days noted on this calendar and suggestions about how to observe them in the 21st century. You are under **no** obligation to observe all the occasions and days mentioned here; in fact, that would be all but impossible at present, since none of us live in a wholly polytheistic city. Every observance is *optional*. This calendar is made available to you as a learning tool, and as a framework to begin or extend your practice of ancient Hellenic religious tradition. Needless to say, ancient Hellenic religion involved many more practices than are implied by this calendar, which is adapted to the modern secular calendar.

The calendar outlines ancient monthly practices, such as Hekate's Deipnon, Noumenia (the visible crescent moon) and the Agathos Daimon. It also lists ancient Athenian festivals on the exact dates where these are known. Where the exact date has not been revealed by research, a question mark follows the name of the festival. Information about the specific observance can be found in the references mentioned above and on the online version.

In addition to ancient festivals and observances, certain modern occasions are listed as well. This includes the Hellenion monthly libation (ensuring that at least one day a month is shared by the community, albeit scattered, at the same time, and also ensuring that each of the twelve Olympians is honored at least once during the year). Note that this libation is not an official practice of Hellenion but a voluntary activity endorsed by many Hellenion members. Some modern festivals are also listed, such as Heliogenna in December, and Prometheia, held in Greece near the summer solstice near Mt. Olympus. At the time of creating this calendar, the exact 2022 dates were not available. (More information about this festival is found at <https://prometheia.wordpress.com>).

Remember that, among the ancient Greeks, **the day begins at sundown of the previous day**. Days in gray indicate the new moon/beginning of Greek month and the Hellenion monthly libation date. The dark of the moon is an approximation based on the Eastern Time Zone (based in Toronto, Ontario) and the exact time of dark of moon and Noumenia varies in other locations depending on your time zone, where in the time zone you live and your latitude.

Transliteration of Greek month names and festivals below used “γ” to represent the short “u” of Greek, “kh” is used to represent “chi” (χ), a sound which does not exist in English, and “e” represents both epsilon (ε) and eta (η). **Ἑρῶσο!**
